Izhevsk Plants 71 and 74 appeared initially on KEYHOLE photography of [REDACTED] the first aerial photography of these plants since World War II. Subsequent KEYHOLE photography of [REDACTED] also covered these plants and was used in the preparation of this report. Together the plants form one integrated installation located in the central part of Izhevsk at 56-49-N 53-10-E (Figure 1). In fact, they are so integrated within the installation that it is not possible to delineate individual components.

The combined installation--one of the oldest steel and arms producing facilities in the USSR

--has a total ground area of approximately 13,975,000 square feet and a total usable floor space of approximately 2,445,445 square feet (Figure 2). During World War II it produced explosives, small arms, and artillery. Since World War II the installation has expanded its production of military and civilian small arms and has engaged in the development of steel production methods and metallurgy as well as in the manufacture of domestic consumer goods.

FIGURE 1. LOCATION OF IZHEVSK.

25X1B

The major components of the installation are annotated on Figure 2 and described in Table 1. Snow cover and the poor image quality of the KEYHOLE photography preclude definite identification of some buildings and the location of rail spurs within the installation.
